

CSR Introduction

Social Contribution Activities
Aiming to be a company friendly
to Earth and People

地球と人に優しい会社を目指して—

Shomon Co., Ltd. conducts various social contribution activities to maintain the rich environment of the earth and local communities.

Our goal is to nurture people who can develop their concern for social contribution activities and protect the natural environment of the future.

Cleaning Activities

Minuma Cleanup Activities

We conduct monthly cleaning activities (Minuma Cleanup Activities) with the goal of protecting the environment of the Minuma rice fields around the head office.

In addition to picking up trash, we also remove illegally dumped waste, and the details of the activities are posted on our website.

In addition, we have been conducting large-scale cleanup activities at the Minuma rice fields for more than 15 years every year in June, Environment Month, and May 30th (Zero Waste Day).

At the start of the activities, only employees were involved, but it is now a large-scale cleaning activity with 200 volunteers, including local residents, companies that have endorsed our efforts, and staff from the police station.

Cleaning of Workplace and Surroundings

Shomon Co., Ltd. conducts cleaning activities around the facility every morning, as well as within the office and factory.

We are implementing the "3S Campaign" promoted by Saitama Prefecture and the Saitama Environmental Industry Promotion Association, and are carrying out efforts to develop human resources who will play an important role in the recycling-oriented society.

In 2016, in recognition of our cleaning activities and human resource development, we received the Encouragement Award in two categories, the Seiketsu Award and the Style Award from the 3S Campaign.

Shomon will raise the environmental awareness of each employee through its cleaning activities and will continue to contribute to society.

Community Contribution Activities

Removal of Illegal Dumping and Disaster Waste

In cooperation with Saitama Prefecture and the Saitama Environmental Industry Promotion Association, we are conducting free removal of waste illegally dumped in rivers and vacant land and waste generated by natural disasters. We also provide support for victims of earthquakes.

Nature Conservation

We donate regularly to the Saitama Greenery Trust Association to promote the preservation of the rich natural and historical environment that Saitama Prefecture, "Sai-no-Kuni," is proud of.

Safety Activities

■ Implementation of Traffic Safety Campaign

In addition to the national traffic safety campaign established by the Ministry of Land, Infrastructure, Transport and Tourism, we regularly conduct traffic safety campaigns with all employees participating. By complying with laws and regulations and striving for road safety, we will protect the safety of people, including people in the community.

In addition, Shomon has introduced digital tachographs not only for collection and transportation vehicles but also for sales vehicles, creating a system to ensure safe driving. By eliminating idling and sudden starting and stopping, we aim to drive in way that is friendly to the global environment and people.

※Head office entrance during the traffic safety campaign

■ Implementation of Occupational Accident Prevention Campaigns

Shomon conducts occupational accident prevention campaigns with seasonal themes.

We are aiming for accident-free and disaster-free operations to protect the safety of all persons involved in waste disposal. This includes the collection sites of waste generators in addition to work carried out within the company's premises.

■ Security Campaign Support

We actively cooperate in police activities such as crime prevention activities and traffic safety activities conducted by Saitama Police.

Shomon supports the creation of pleasant communities.

Environmental Policy

■ Effective Use of Resources to Protect the Global Environment

■ Through energy saving and effective use of fuel in collection and transportation vehicles and heavy machinery in factories, reduce energy consumption

■ Improve environmental awareness through proactive in-house training

■ Actively respond to environmental laws and other requirements that we agree with

■ Environmentally friendly initiatives

Waste reduction for landfill and incineration and promotion of recycling business

Aiming to reduce the impact on the environment by promoting efficient operation of plants. Proactive separation of waste and development and production of recycled fuel that contributes to CO2 reduction

■ Volunteer cleaning activities

With our location adjacent to the Minuma rice paddies, an extremely rare nature reserve in the Tokyo metropolitan area, we have been conducting volunteer cleaning activities regularly since 2000 (the last Saturday of every month). On the annual zero waste day, we conduct extensive cleaning activities with companies that support us, and we will continue this indefinitely.

Shomon supports "Fun to Share" for realizing a low-carbon society.
